Adapting to Climate Change – ebook

Authors: Under the direction of **Agathe Euzen, Bettina Laville and Stéphanie Thiébauld**

This book, which consists of some fifty articles by scientists and experts, is unique. It makes us think about what lies behind the notions of adaptation and maladaptation, drawing on several disciplines, sectors and regional fields. It also highlights the checks and limitations of adaptation, as well as reflecting on and suggesting ways of acting and adjusting.

The contributions made to this work serve to reinforce the implementation of the Paris Climate Agreement (2015), especially the COP 23 climate conference (23rd Conference of the Parties to the United Nations Framework Convention on Climate Change, Bonn, 2017), where adaptation, its objectives and financing, are some of the priorities.

This book is the result of a partnership between the CNRS and Comité 21. It was jointly edited by Agathe Euzen (deputy scientific director at the CNRS Ecology and Environment

Institute); Bettina Laville (state councillor and Comité 21 chair); and Stéphanie Thiébauld (director of the CNRS Ecology and Environment Institute).
